# MOHAMED SADEK

## AI-Assisted Digital Project Builder — Websites & Digital Operations

Shebin El-Kom, Menoufia, Egypt | 01000025168 | mohamed_sadek07@outlook.com | github.com/nexora-01-eg | nexora-01-eg.github.io

## SUMMARY

Builder of complete web projects — brand sites, digital menus and ordering flows, and storefronts — planned, built, tested, and documented through AI-assisted workflows I set up myself. Strongest work to date: a coffee-brand ordering platform (live storefront plus a Cloudflare Workers API with authentication, rate limiting, and a 33-assertion integration test suite). Undergraduate in Economics and Political Science (Cairo University, expected 2027), seeking a junior role in website administration, digital operations, content, or data work.

## SKILLS

**Web building:** HTML, CSS, JavaScript (vanilla-first), responsive Arabic/RTL layouts, single-file and template-based site production.

**Frameworks & stacks:** React, TypeScript, Vite, Three.js (3D scenes, GLSL shaders), Next.js with Supabase, GSAP + ScrollTrigger + Lenis motion.

**Backend & data:** Cloudflare Workers (Hono), D1/SQLite, Zod validation, Drizzle ORM, SQL migrations and seed data, REST APIs, PBKDF2/HMAC session authentication.

**Quality:** integration and end-to-end test suites, project audits, readiness reports, QA documentation, link/content verification.

**AI workflows:** AI-assisted development with OpenCode, Codex, Claude, Cursor, and Manus; prompt-driven planning, building, review, and iteration.

**Operations:** deployment to GitHub Pages, Vercel, and Cloudflare; asset optimization (WebP); template reuse across 13+ sites; content organization; online research and tool evaluation.

## SELECTED PROJECTS

All projects built independently with AI-assisted workflows, 2026. Live links verified at publication.

**AL-Diwan Coffee — Ordering Platform (Storefront + API)** Live · nexora-01-eg.github.io/al-diwan-coffee

- Built a cinematic Arabic storefront (Three.js, GSAP, Lenis) with cart and WhatsApp checkout, then audited its gaps in a written report.
- Built the missing backend: Cloudflare Workers API (Hono + D1 + Zod) with admin dashboard, order tracking, idempotency, and stock handling.
- Implemented security controls: PBKDF2 password hashing, HMAC session cookies, rate limiting, CSRF protection.
- Wrote and ran a 33-assertion integration suite plus a 10-step end-to-end order journey; documented readiness and QA in 9 project files.

**SHE — Live Fashion Store (she.shoes)** Live · she.shoes

- Runs a real-domain storefront for a women's shoes and bags boutique, Arabic RTL with cash-on-delivery flow.
- Built a Next.js 15 + Supabase codebase with product pages, checkout, orders, and admin; added build guards and seed verification scripts.
- Produced a storyboard-driven promo video (1080×1920) for the store.

**NEXORA — Digital Services Platform Site** Live · nexora01eg.vercel.app

- Designed and deployed the platform site presenting identity, websites, marketing, and automation as one growth system.

**Nexora Client Sites — Small-Business Website Production** 13+ sites · github.com/nexora-01-eg/nexora-client-sites

- Produced 13+ small-business sites (gyms, furniture, spa, halls, offices, real estate) from a reusable template core, with before/after comparisons.
- Maintained the template core with built-in reduced-motion support and one-file re-branding.

**Rollz Restaurant System** Live demos · TypeScript codebase

- Built a typed restaurant-system codebase (TypeScript, Drizzle ORM) with research notes and a 50-item development roadmap.
- Shipped three live ordering surfaces: interactive QR menu, brand site, and fries menu — all converting to WhatsApp orders.

**Mohamed Sadek Atlas — Personal OS** github.com/nexora-01-eg/mohamed-sadek-atlas

- Built a zero-dependency interactive self-portrait (personal OS × mind map) with a JSON data architecture separating public and private layers.

## EDUCATION

**Faculty of Economics and Political Science — Cairo University** Expected graduation 2027

Undergraduate student. Independent web project work alongside studies, from Shebin El-Kom, Egypt.

## LANGUAGES

Arabic — native · English — B1 (self-assessed)

Everything above is backed by inspectable evidence: live sites, public repositories, or project files (verified October 2026). No employment history is claimed; projects are independent builds.
