MOHAMED SADEK

AI-Assisted Digital Project Builder — Websites & Digital Operations

Shebin El-Kom, Menoufia, Egypt | 01000025168 | mohamed_sadek07@outlook.com | github.com/nexora-01-eg | nexora-01-eg.github.io

Positioning: building complete web projects — brand sites, digital menus and ordering, storefronts — through AI-assisted workflows I configure and refine myself, with written audits, plans, tests, and honest documentation. Open to junior roles in website administration, content administration, digital operations, AI operations, data entry, and e-commerce operations.

PROFILE

Undergraduate at the Faculty of Economics and Political Science, Cairo University (expected 2027), building and improving web projects independently from Shebin El-Kom. My portfolio spans 100+ public repositories and 30+ deployed sites: cinematic brand sites, restaurant ordering systems, e-commerce storefronts, and one fully documented full-stack platform with its own tested API. I keep claims verifiable — every project below can be opened, and concept demos are labeled as concepts.

SKILLS

Web building: HTML, CSS, JavaScript (vanilla-first), responsive Arabic/RTL design, single-file and template-based production, accessibility basics (keyboard paths, reduced-motion support).

Motion & 3D: GSAP + ScrollTrigger, Lenis smooth scroll, Three.js / React-Three-Fiber, custom GLSL shaders, capped device-pixel-ratio and CSS fallbacks.

Frameworks: React 18/19, TypeScript, Vite, Next.js 15 (ISR, route-level SEO), Supabase integration.

Backend & data: Cloudflare Workers (Hono), D1/SQLite, Zod validation, Drizzle ORM, SQL migrations, seeding, REST APIs, PBKDF2/HMAC auth, rate limiting, CSRF protection, idempotency.

Quality & process: integration/E2E test suites (33 assertions + full order journey), written audits (deep-audit, readiness, QA reports), before/after review, versioned iteration.

AI workflows: OpenCode, Codex, Claude, Cursor, Manus — prompt-driven planning, building, review, and iteration; a curated 53-template library with verification logs.

Content & media: Arabic copywriting for brand sites, storyboard-driven promo videos (HyperFrames), WebP asset pipelines.

Operations: GitHub Pages, Vercel, Cloudflare deployments; domain setup (she.shoes); template reuse across 13+ client-style sites; online research and tool comparison.

FEATURED PROJECTS — DETAILED

AL-Diwan Coffee — بُن الديوان

LIVE · FULL-STACK

Coffee brand ordering platform — storefront, API, admin, tests

- **Storefront:** cinematic Arabic RTL experience — Three.js 3D accents, GSAP scroll story, Lenis smooth scrolling, cart, WhatsApp checkout, reduced-motion support.
- **Written audit first:** a deep self-audit identified missing backend, client-only orders, no auth/admin, missing SEO/PWA, heavy images — before any new code.
- **Backend built to the plan:** Cloudflare Workers API (Hono + D1 + Zod): products, orders, tracking, admin; monorepo with shared validation packages and SQL migrations.
- **Security:** PBKDF2-SHA256 hashing (100k iterations), HMAC 12h session tokens, HttpOnly/SameSite cookies, rate limits (login 10/min, orders 20/min, tracking 30/min), CSRF origin checks, secure headers, parameterized queries.
- **Verified:** 33 passing integration assertions (auth paths, 401/422 handling, idempotency keys, stock guards, illegal status-transition rejection, logout invalidation) + a 10-step end-to-end order journey; untested areas documented honestly (load tests, payment webhooks).
- **Documentation:** 9 project documents — audits, implementation plan, readiness report, QA report, deployment checklist, owner to-do list.

SHE — she.shoes

LIVE STORE

Women's shoes & bags boutique on its own domain

- **Live storefront:** fast static build served via Cloudflare — Arabic RTL, cash-on-delivery flow, WhatsApp contact, product catalog.
- **Full codebase:** Next.js 15 + React 19 + Supabase — product pages, checkout, orders, admin area, content collections (offers, story, world), image pipeline with Sharp.
- **Build safety:** a guard script runs before every build (strict mode available); seed data verified by script; phased versioning (0.1.0-phase-a).
- **Marketing asset:** a 25s vertical promo video produced from a written 6-frame storyboard (type, pacing, RTL rules specified before production).

NEXORA Platform

LIVE SITE

Digital services platform — identity, websites, marketing, automation

- Designed and deployed on Vercel; fully static self-contained pages; serves as the umbrella brand for client-site and demo production.

Live: https://nexora01eg.vercel.app/

Mohamed Sadek Atlas — "A Mind in Motion"

PERSONAL OS

Zero-dependency interactive self-portrait: OS × mind map × documentary

- Vanilla JS + CSS + SVG only; runs from static files with a tiny local server; fetch-based data layer.
- Data architecture: public JSON layers (profile, projects, skills, ideas) with gitignored private overrides; every item typed as confirmed / interpretation / aspiration so nothing invented presents itself as fact.
- Knowledge-graph visualization, in-browser editing with local backup, MD/JSON export of daily reviews.

Repo: github.com/nexora-01-eg/mohamed-sadek-atlas

Rollz Restaurant System

SYSTEM CASE STUDY

One brand, one codebase, three live ordering surfaces

- TypeScript client with Drizzle ORM schema and migrations; research notes, location-map review, and a 50-item development roadmap.
- Live: interactive QR menu (WhatsApp ordering), Rollz Fast brand site, Rollz Fries menu — all in Arabic RTL.

Live: https://rollzqrmenu-jjayceny.manus.space/ · Repo: github.com/nexora-01-eg/rollz-restaurant

Nexora Client Sites — Post-Factory

CLIENT WORK

Production line for small-business websites

- 13+ sites: gyms, furniture showrooms, spa, event halls, offices, real estate, restaurants — fast single-file builds.
- Reusable template core derived from the Al-Diwan structure: re-brand by editing one config file; 18 motion systems included; reduced-motion supported.
- Before/after comparison screenshots maintained in the repository.

Repo: github.com/nexora-01-eg/nexora-client-sites

Sasha Cinema

PROTOTYPE

Bridal fashion story as a 7-scene film — code complete, deployment pending

- Vite + React 18 + TypeScript; Three.js / React-Three-Fiber with custom GLSL shaders (silk, waves) and GPU particles; DPR capped at 1.5.
- CSS fallback when WebGL is unavailable or reduced motion is preferred; per-scene SEO routing (hash router); bilingual content layer; keyboard + swipe navigation.

Code available on request

AI Promo Video Production

CAPABILITY

Storyboard-driven videos with an AI video toolchain (HyperFrames)

- SHE promo: 1080×1920, 25s, six frames planned in writing (hook → brand → showcase → value → CTA) with motion grammar and RTL type rules.
- Rollzwich promo plus a 9:16 product tour — captures, snapshots, and rendered versions.

Sample renders available on request

PROJECT ARCHIVE — ALL VERIFIED LINKS

PROJECT	WHAT IT IS	STATUS
Restaurants & ordering		
Resto POS — مطعمي	Restaurant management platform (POS)	Live
Nexora Resto	Fast Arabic restaurant order page	Live
Rollz QR Menu	Interactive menu → WhatsApp ordering	Live
Rollz Fast	Brand & ordering site — Shebin El-Kom	Live

EDUCATION & LANGUAGES

Faculty of Economics and Political Science — Cairo University Expected graduation 2027
Undergraduate student.

Languages: Arabic — native · English — B1 (self-assessed)

HOW I WORK

1. Understand — written problem audit before code (e.g., Al-Diwan deep audit identified the missing backend).

2. Research — research notes and option comparison (Rollz roadmap; 53-template library with verification logs).

3. **Plan** — implementation plan with explicit "no destructive rewrites" constraints.

4. **Choose the right level of technology** — single fast file when enough; Next.js + Supabase when a store needs it; a Workers API when orders must be trusted.

5. **Build** — small increments, versioned, reusable cores.

6. **Test & audit** — real integration/E2E suites with honest "not tested" lists.

7. **Review & improve** — before/after comparisons; readiness reports; to-do lists for next versions.

All projects built independently with AI-assisted workflows (2026). Everything above is backed by inspectable evidence — live sites, public repositories, or project files — verified October 2026. No employment history, clients, revenue, or metrics are claimed. Forked repositories on the GitHub account are excluded from this CV.
