MOHAMED SADEK

Arabic–English AI Response Evaluation Candidate — Native Arabic · Entry Level · Egypt-Based

Shebin El-Kom, Menoufia, Egypt | 01000025168 | mohamed_sadek07@outlook.com | github.com/nexora-01-eg | nexora-01-eg.github.io

Prepared for: OpenTrain — Response Evaluation Expert (Arabic and English)

SUMMARY

Native Arabic speaker with working English (B1, self-assessed) who reviews content against written criteria and documents every judgment. Built and shipped a live bilingual website with paired Arabic/English content, and produced evidence-based quality reports across an independent web-production line — including a 33-assertion test suite with documented pass/fail reasoning and 9 QA/readiness documents. Applying for the Response Evaluation Expert role: reviewing and ranking Arabic and English AI responses, writing bilingual examples, and explaining quality judgments clearly. Available 20+ hours per week, fully remote, based in Egypt (explicitly eligible for this role).

BILINGUAL WORK

- Authored the **complete paired Arabic/English content** of a live bilingual website (parallel language blocks, per-language typography): nexora-01-eg.github.io
- Writes English project documentation (READMEs, readiness reports) as a second language — plain, clear B1 English.
- Arabic: native; daily production language across all projects.

EVALUATION & EXPLANATION SKILLS (THE CORE OF THIS ROLE)

- **Ranking against criteria:** wrote and executed a 33-assertion integration test suite plus a 10-step end-to-end order journey — each check judged and documented with reasons.
- **Explaining judgments:** 9 written QA/readiness documents on one project, using explicit status labels (pass / not-run / blocked) and stating why.
- **Consistency enforcement:** a verification log covering a curated 53-template library; consistent terminology across 13+ Arabic websites.
- **Fix-then-reverify pattern:** found real defects during published QA (an RTL-only overflow bug; an accessibility naming mismatch), fixed them, and re-verified (Lighthouse Accessibility 1.0, zero failures).

AI WORKFLOWS

- Daily AI-assisted production with OpenCode, Codex, Claude, Cursor, and Manus — planning, drafting, reviewing, and correcting model output.
- Comfortable judging AI-generated text quality: naturalness, accuracy, instruction-following — this is part of the daily loop, not a concept.

SELECTED PROJECTS (INDEPENDENT BUILDS; LINKS VERIFIED OCTOBER 2026)

1. Bilingual website (EN/AR) — live — both language versions authored by hand. nexora-01-eg.github.io

2. AL-Diwan Coffee — live Arabic ordering platform with documented QA suite. nexora-01-eg.github.io/al-diwan-coffee/

3. SHE — live Arabic storefront — she.shoes

4. Nexora Client Sites — 13+ Arabic sites — github.com/nexora-01-eg/nexora-client-sites

EDUCATION

Faculty of Economics and Political Science — Cairo University. Expected graduation 2027. Full remote availability of 20+ hours/week alongside studies.

LANGUAGES

Arabic — native · English — B1 (self-assessed)

Every claim above is backed by public, inspectable evidence (verified October 2026). No employment history is claimed; all projects are independent builds.
